Project Design Phase-I
Solution Architecture

Date	30 October 2023
Team ID	NM2023TMID06835
Project Name	The Future of Work: Data Analysis of Glassdoor Jobs
Maximum Marks	4 Marks

Solution Architecture:

Glassdoor is a popular job and company review website that allows employees and former employees to anonymously review companies and their management. If you're looking to design a solution architecture for a Glassdoor-likewebsite, here are the key components and considerations you should keep in mind:

- Implement secure user registration and authentication.

- Choose a database system (e.g., PostgreSQL, MySQL) to store userdata, company reviews, job listings, and other relevant information.

- Develop a user-friendly and responsive web interface for both desktopand mobile users.

- Build a search engine for job and company searches.

- Design the system with scalability in mind to handle a growing user base andincreasing data volume.
